

Atrial Fibrillation Nursing Care Plan

Patient Information

Name: _____ Age: _____

Medical Record Number: _____

Date of Admission: _____

Primary Diagnosis: Atrial Fibrillation

Assessment

Heart Rhythm and Rate: _____

Symptoms of Atrial Fibrillation: _____

Blood Pressure and Heart Sounds: _____

Relevant Medical History: _____

Current Medications: _____

Nursing Diagnosis

- Ineffective Cardiac Output related to altered electrical conduction

Goals and Expected Outcomes

- Short-term Goal: Achieve and maintain a stable heart rate within 24 hours
- Long-term Goal: Prevent complications associated with atrial fibrillation

Nursing Interventions

1. Monitor heart rate and rhythm regularly
2. Administer antiarrhythmic medications as prescribed
3. Educate the patient about atrial fibrillation and its management
4. Assess for signs of stroke or other complications
5. Encourage lifestyle modifications to reduce symptoms

Evaluation

- Monitor patient response to interventions and medications
- Adjust care plan based on changes in patient's condition
- Document and communicate progress to healthcare team

Patient Education

- Importance of medication adherence
- Lifestyle changes (diet, exercise, smoking cessation)
- Recognizing symptoms of complications

Follow-up Care

- Schedule regular follow-up appointments
- Plan for ongoing monitoring and adjustment of treatment

Healthcare Professional Details

Nurse's Name: _____

Signature: _____
