Cerebellum Function Tests

| 1. Gait and Stance | |
|---|---|
| Instructions: Observe the patient walking, turning, and standing with feet together (eyes open an then closed). | d |
| Observations: | |
| | |
| Findings: | |
| Normal Abnormal Specify: | |
| 2. Romberg Test | |
| Instructions: Patient stands with feet together and eyes closed for 30 seconds. | |
| Observations: | |
| | |
| Findings: | |
| □ Stable Unstable | |
| 3. Finger-to-Nose Test | |
| Instructions: Patient alternately touches their nose and the clinician's finger with eyes open, then closed. | ١ |
| Observations: | |
| | |
| Findings: | |
| Accurate Inaccurate (Specify errors: |) |

| Instructions: Patient | slides the heel of one foot down the shin of the opposite leg while lying down. |
|---|---|
| Observations: | |
| | |
| | |
| Findings: | |
| ☐ Smooth | Clumsy / Interrupted |
| 5. Rapid Alternating | g Movements (Dysdiadochokinesia) |
| Instructions: Patient supination. | performs rapid alternating movements with hands, such as pronation- |
| Observations: | |
| | |
| Findings: | |
| Coordinated | Uncoordinated |
| 6. Rebound Phenon | nenon of Stewart-Holmes |
| Instructions: Cliniciar rebound movement. | n holds and suddenly releases the patient's flexed arm, observing for excessive |
| Observations: | |
| | |
| | |
| Findings: | |
| | Absent |
| Findings: | |
| Findings: Present 7. Speech Evaluation | |
| Findings: Present 7. Speech Evaluation | on |
| Findings: Present 7. Speech Evaluation Instructions: Assess | on |
| Findings: Present 7. Speech Evaluation Instructions: Assess | on |

| Overall Assessment | | | | | | | |
|----------------------|----------------|---------------|------------------------------|--|--|--|--|
| Summary of Findings: | | | | | | | |
| | | | | | | | |
| Impression: | Normal Cerebel | llar Function | Abnormal Cerebellar Function | | | | |
| Specific Areas of C | oncern: | | | | | | |
| | | | | | | | |
| Recommendation | S | | | | | | |
