

# Depth Perception Test

Patient information	
Name:	
Age:	
Gender:	
Occupation:	
Date assessed:	
Reason for consultation	
Initial depth perception testing	
<ol style="list-style-type: none"><li>1. Ask the patient to hold up their index finger midway between their eyes and the circle printed on paper.</li><li>2. Instruct the patient to focus on the circle. Ask them what they see. What does their finger look like?</li><li>3. Now, instruct the patient to focus on their finger. Ask them what they see. What does the circle look like?</li></ol>	
Remarks	
	<ul style="list-style-type: none"><li>• One finger is easier to see than the other</li><li>• One finger is larger than the other</li><li>• Fingers appear and disappear</li><li>• Patient only sees just one finger</li><li>• One finger drifts directly over the circle, while the other finger is far to the left or right</li></ul>
