#### Swab Tests

Performed?

Yes  No  Normal  Abnormal

Details (indicate type below):

Waived

#### Imaging Studies

Performed?

Yes  No  Normal  Abnormal

Details (indicate type below):

## Healthcare Professional's Notes and Recommendations

### Observations and Diagnosis

Patient has a history of ear infections in the left ear, leading to tympanoplasty. Currently experiencing mild hearing loss and irritation in both ears. Smoking may be contributing to nasal and throat irritation. Chronic otitis media in the left ear, mild conductive hearing loss, and irritation likely related to smoking.

### Treatment Plan

Recommend follow-up audiometry in 6 months, consider cessation of smoking to reduce irritation, and monitor for any changes in ear symptoms.
