TOTAL SCORE:

Scoring

The scoring key for the Exercise Motivation Inventory-2 (EMI-2) is as follows:

- Each item in the EMI-2 is rated on a 6-point Likert scale, ranging from 0 to 5.
- Participants circle the number that best reflects their agreement with each statement.
- For each subscale (category of exercise motivation), sum the scores of the items belonging to that subscale.
- The total score for each subscale represents the participant's level of motivation in that specific category.
- Higher scores indicate stronger motivation in the corresponding subscale.

Participants' total scores across all 14 subscales provide a comprehensive overview of their overall exercise motivation profile. These scores can be used to assess individual motives for exercise and tailor interventions accordingly.
