

Heart Calcium Test

Patient Information

Patient Name:

Date of Birth:

Medical Record Number:

Date of Test:

Referring Physician:

Test Type: Coronary Calcium Scan

Indication for Test:

- Strong family history of early coronary artery disease
- Intermediate risk for heart attacks
- Uncertain risk for heart attacks

Results:

Agatston Score: _____

Interpretation:

- Score of 0 (No calcium detected, low risk of future heart attacks)
- Calcium present, with a score of _____ (indicates risk level)
- Score greater than 300 (suggests extensive disease and high heart attack risk)
- Score as a percentage: _____% (related to age and sex)

Follow-up Recommendations:

- No change to the current treatment.
- Adjust medication or dose.
- Dietary and exercise recommendations.
- Weight-loss goals.
- Additional tests.
- Follow-up appointments for monitoring and treatment evaluation.
