

Histrionic Personality Disorder Test

This test is designed to assess the presence of traits associated with Histrionic Personality Disorder (HPD) as described in the DSM-5. It is intended for preliminary self-assessment purposes only and not to be used as a diagnostic tool. A diagnosis of HPD can only be made by a qualified mental health professional based on a comprehensive clinical evaluation.

Instructions:

Please read each statement carefully and indicate how much you agree or disagree with it based on your experiences over the past six months. Answer all questions honestly for the most accurate assessment.

Scoring Key

- 0 = Strongly Disagree
- 1 = Disagree
- 2 = Neutral
- 3 = Agree
- 4 = Strongly Agree

- 4 - Strongly Agree

Total Scoring:

Scoring

Total your score by adding up the numbers you selected for each question. The maximum possible score is 40.

Interpretation

- **0-10:**
Low indication of HPD traits.
- **11-20:**
Some HPD traits may be present, but not necessarily indicative of a disorder.
- **21-30:**
Moderate indication of HPD traits. Consider discussing these results with a mental health professional.
- **31-40:**
Strong indication of HPD traits. It is advisable to seek a comprehensive evaluation by a mental health professional.

Professional Use Only

If you are a healthcare provider administering this test, please ensure to follow up with a detailed clinical interview to confirm any findings and discuss potential treatment options with your patient.
