Rancho Los Amigos Scale (Level of Cognitive Functioning Scale)

| Patient's Full Name: | | |
|------------------------------------|------|---|
| Clinician's Full Name: Date rated: | | |
| | (1) | Level I - No Response Your patient did not respond to external stimuli and they appear to be asleep. |
| | (2) | Level II - Generalized Response Your patient reacts to external stimuli in non-specific, inconsistent, and non-purposeful manners with stereotypic and limited responses. |
| | (3) | Level III - Localized Response Your patient responds specifically and inconsistently with delays to stimuli, but they may also follow simple commands for motor action. |
| | (4) | Level IV - Confused, Agitated Response Your patient exhibits bizarre, non-purposeful, incoherent, or inappropriate behaviors, has no short-term recall, and their attention is short and non-selective. |
| | (5) | Level V - Confused, Inappropriate, Non-agitated Response Your patient gives random, fragmented, and non-purposeful responses to complex or unstructured stimuli. They are able to follow simple commands consistently, but their memory and selective attention are impaired, and new information is not retained. |
| | (6) | Level VI - Confused, Appropriate Response Your patient gives context-appropriate, goal-directed responses, and is dependent upon external input for direction. There is carry-over for relearned tasks, but not for new tasks, plus, recent memory problems persist. |
| | (7) | Level VII - Automatic, Appropriate Response Your patient behaves appropriately in familiar settings, is able to perform daily routines automatically, and shows carry-over for new learning at lower than normal rates. They are able to initiate social interactions, but their judgment remains impaired. |
| | (8) | Level VIII - Purposeful, Appropriate Response Your patient is oriented and responds to the environment but their abstract reasoning abilities are decreased relative to pre-morbid levels. |
