Nursing Assessment for Risk	for Infection
Assessment	Notes
Assess the patient for risk factors or current injuries or treatments that could put the patient at risk for infection.	
Review the patient's medications to identify treatments that may cause immunosuppression.	
Monitor for signs of infection.	
Assess the patient's weight, serum albumin, and nutritional status.	
Nursing Interventions for Risk	for Infection

Intervention	Notes
Wash your hands and use aseptic technique for nursing tasks involving non-intact skin or invasive lines.	
Limit visitors and/or use protective isolation for patients who are at risk for infection.	

Teach the patient, family, and caregivers signs and symptoms of infection and when to contact a healthcare provider.	
Encourage the intake of calorically dense and protein rich foods.
