Total score: _____

Scoring

The SCAT contains 15 items, 10 of which measure symptoms associated with anxiety, with five others that are not scored included to reduce the likelihood of an internal response-set bias.

The scores for the 10 items are summed to provide an overall measure, with a high score reflecting a greater tendency to experience competitive anxiety. Use the following table to calculate a total score.

A score of less than 17 indicates a low level of anxiety, 17 to 24 an average level of anxiety, and more than 24 a high level of anxiety.

The score for the response to each question is detailed below:
