## **Thigh Thrust Test**

Patient Information		
Name:	Date of Test:	Age:
Gender:	Referring Physician:	
Reason for Evaluation:		

## **Test Procedure**

- 1. **Positioning:** Instruct the patient to lie supine on a treatment table with both legs extended.
- 2. **Examiner Position:** Stand on the side being assessed, facing the patient's lower extremities.
- 3. **Stabilization:** Place one hand over the patient's anterior superior iliac spine (ASIS) to stabilize the pelvis.
- 4. **Thrust Application:** With the other hand, position it over the patient's knee of the same leg being assessed.
- 5. **Thrust Force:** Apply a controlled anterior thrust force through the femur, directing it towards the sacroiliac joint.
- 6. **Observation:** Observe the patient's response for any reproduction of sacroiliac joint pain or discomfort.

Interpretation		
Positive Test:	Negative Test:
